NHT Electronics recognise that most of the activities that the company undertakes in the course of its business will have some impact on the environment.

We firmly believe that our reputation as a well-respected electronic designer and manufacturer and under the scope of the Design and Manufacture of electronic and electrical based assemblies and products will be measured not only by the quality of our products, but also by our impact on the shared environment.

We also recognise that the protection of the environment, the prevention of pollution and the reduction of waste (sustainable resource use, climate change mitigation and adaptation, and protection of biodiversity and ecosystems) is an important aspect of the Company's overall performance and is a major responsibility of Top Management.

In order to translate these beliefs into business practice, a programme of training, development and continual improvement will be undertaken and maintained.

The Company shall strive to improve environmental performance by:-

- Re-using packaging and recycling obsolete cardboard, toner cartridges and paper.
- Preventing pollution of land, air and water by ensuring that our hazardous and chemical waste is treated and disposed of by a competent authority. We shall endeavour to use solvent free substances where available.
- Complying with all environmental legislation affecting our business.
- Reduce water usage where possible.
- Benchmark and review our environmental performance through the establishment of waste reduction performance indicators.

We are conscious that the motivation of our employees is dependent on their training and understanding of the tasks they are expected to perform. It is part of our on-going training programme that this policy is communicated and understood at appropriate levels within the company and to interested parties.

Signed: 

Name: Gary Hewitt

Position: Managing Director
